

INTRODUCING OUR NEW Digicon 3 series finishing press

We can now offer a range of fine embellishments to our digitally printed labels with our newly installed Digicon 3 series with flatbed screen printing. The press comes with all the standard features you'd expect like corona treatment, lamination and automatic knife setting but in order to meet the needs of our more discerning customers we've opted to add a screen printing module, two print heads and a turnbar. See below for a summary of the new label embellishments we can now offer.

SCREEN PRINTING: The flatbed screen printing module allows us to offer tactile and relief varnishes adding real value to the label and enhancing the look of your products. Screen printing allows for tactile triangles to be added to digitally printed labels, ideal for the chemical sector and for markets such as Vape labelling.

TURNBAR: Allows us to print labels digitally and also print on the backing liner and adhesive side of the label. This is ideal for short run point of sale labels for the retail sector.

TWO PRINT HEADS: Allows us to offer multiple varnish finishes to your labels with two separate spot varnishes and an additional textured or relief varnish through the print screen module.

Finally the new press is more than twice as productive as the Digicon 1 series it replaced so we are aiming to use the additional capacity to grow but to also offer an improved service and reduced leadtimes. For more information on what the new Digicon 3 series can offer do please contact our sales team sales@windmilltapes.co.uk
